### **EXAMINER'S AMENDMENT**

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Don Heckenberg on June 30, 2009.

The application has been amended as follows:

11. (Currently Amended) A contents information output system that outputs contents information to an identifiable recording medium, comprising:

an identification device adapted to identify a recording medium to which contents information is to be printed;

a first determination device adapted to determine whether or not it is authorized to output the contents information to the recording medium identified by said identification device;

a second determination device adapted to determine whether or not the contents information to be output is registered and further to determine, when it is determined that the contents information to be output is registered, whether or not the registered contents information is corrected;

an output device operable where it is determined by said first determination device that it is authorized to output the contents information to the recording medium identified by said identification device, so that when it is determined by said second

determination device that the contents information to be output is registered but not corrected, first output processing is performed for outputting the registered contents information, which is registered but not corrected to the recording medium, and so that when it is determined by said second determination device that the contents information to be output is registered and corrected, second output processing is performed for outputting the contents information, which is registered and corrected, to the recording medium; and

a managing device adapted to operate in the case where the first output processing is performed by said output device, to manage identification information of the recording medium identified by said identification device and the contents information output in the first output processing in association with each other, and in the case where the second output processing is performed by said output device, to manage the identification information of the recording medium identified by said identification device, the contents information output in the second output processing, and the contents information before being corrected in association with each other.

17. (Currently Amended) A contents information output method for outputting contents information to an identifiable recording medium, comprising:

an identification step of identifying a recording medium to which contents information is to be printed;

a first determination step of determining whether or not it is authorized to output the contents information to the recording medium identified in said identification step;

a second determination step of determining whether or not the contents information to be output is registered and further determine, when it is determined that the contents information to be output is registered, whether or not the registered contents information is corrected;

an output step to be executed, in the case where it is determined in said first determination step that it is authorized to output the contents information to the recording medium identified in said identification step, so that when it is determined in said second determination step that the contents information to be output is registered but not corrected, first output processing is performed for outputting the registered contents information, which is registered but not corrected, to the recording medium, and so that when it is determined in said second determination step that the contents information to be output is registered and corrected, second output processing is performed for outputting the contents information, which is registered and corrected to the recording medium; and

a managing step to be executed, in the case where the first output processing is performed in said output step, for managing identification information of the recording medium identified in said identification step and the contents information output in the first output processing in association with each other, and in the case where the second output processing is performed in said output step, for managing the identification information of the recording medium identified in said identification step, the contents information output in the second output processing, and the contents information before being corrected in association with each other.

### **REASONS FOR ALLOWANCE**

The following is an examiner's statement of reasons for allowance: Thaxton US Publication 2003/0035539 A1 teaches authenticating the medium before printing registered contents, and then outputting those contents. However, Thaxton fails to teach determining if the registered contents have been altered, and if they have been altered, outputting the altered contents, and if they have not been altered, outputting the registered contents.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to CORDELIA KANE whose telephone number is (571)272-7771. The examiner can normally be reached on Monday - Thursday 8:00 - 5:00 EST.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Gilberto Barron can be reached on 571-272-3799. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
